

North East England Annual Report

This report is a summary of Seasearch activities in North East England in 2014. We ran two Observer courses and a Surveyor course, providing training for 44 people. We carried out Seasearch dives at 38 sites, and produced 43 Seasearch Survey forms and 62 Observation forms, making over 2,000 records of over 260 species. Click here to view Seasearch records on the NBN Gateway interactive map.

THANK YOU to everyone who took part in Seasearch and contributed records of marine wildlife and habitats.

Map of sites surveyed by Seasearch North East in 2014

Read on to find out about some of the interesting wildlife we saw on these dives!

If you would like more information about Seasearch dives and courses in North East England, contact Paula Lightfoot on <u>p.lightfoot@btinternet.com</u> or visit the Seasearch website <u>www.seasearch.org.uk</u>

In 2014 Seasearch North East received support from the following organisations:

dive into conservation

Seasearch North East England 2014 Annual Report

Yorkshire

There are very few dive charter boats operating in Yorkshire, so we rely on Seasearch records from independent and club dives. We are extremely grateful to divers from Cleveland Sub Aqua Club and South Bay Scuba for carrying out Seasearch dives on nine different wreck and reef sites in Yorkshire and filling in six Observation forms and three Survey forms. Thank you!

We carried out one shore dive in the Runswick Bay rMCZ in June, further details are available in a brief <u>summary report</u>. We are delighted that Runswick Bay rMCZ was included in the consultation for designation under Tranche 2 of the MCZ process, and especially pleased that it is now being considered for designation for its intertidal as well as its subtidal features, as recommended in our <u>2012 report</u>.

The entry point for shore dives at Runswick Bay

A highlight of our Yorkshire dives was the discovery of a 'Gubby's Reef', a fascinating and diverse site near Scarborough. A dive on Gubby's Reef in September arranged by South Bay Scuba as part of the Conchological Society's annual marine field meeting revealed several interesting mollusc species, including the colourful nudibranch *Cuthona caerulea*, which feeds on *Sertularella* hydroids.

This is the second Yorkshire record of this species on the NBN Gateway, the first being found at Filey in 2012 during Scarborough Sub Aqua Club's Real Reefs Project.

Another interesting nudibranch from Gubby's Reef was Lomanotus marmoratus, which was collected from the antenna hydroid, Nemertesia antennina. This is only the second record of this species on the NBN Gateway for the east coast, the first being from Salthouse Beach in Norfolk by Seasearcher Michael Southwood.

Cuthona caerulea from Gubby's Reef

Lomanotus marmoratus from Gubby's Reef

On a visit to an old favourite dive site, Calf Allen Rocks near Scarborough, Anne Morrison from South Bay Scuba made the first Yorkshire record of the nudibranch *Rostanga rubra*. This sea slug is bright orange to red which gives it good camouflage against the sponges it feeds on. However, here it is easy to spot on a turf of bryozoans and hydroids – perhaps it is lost!

Rostanga rubra on Calf Allen Rocks by Anne Morrison

Durham Heritage Coast

We had two excellent days of diving on the Durham Heritage Coast in July and August. We visited Rocky Dean Scars just south of Sunderland, two sites near Salterfen Rocks and Nose's Point just south of Seaham. These were supplemented by snorkelling surveys carried out by Ivan Dunn at Blackhall Rocks and Easington Colliery.

One of the most notable features of these dives was the great abundance of gas mantle sea squirts, *Corella paralellogramma* and the dwarf sea squirt *Perophora listeri*. One of the most bizarre sights was the parasitic copepod *Doridicola agilis* infesting the crystal sea slug *Janolus cristatus*.

Crystal sea slug infested with the copepod parasite Doridicola agilis, photos by Tom Clarke

As a wonderful finale to the July dives, we enjoyed watching the Sunderland Air Show as we travelled back up the coast – the highlight was when a Lancaster, a Spitfire and a Hurricane flew right over the dive boat!

Lancaster, Spitfire and Hurricane from the Sunderland Air Show

Happy divers watching the Sunderland Air Show from the dive boat Spellbinder II

We recorded over 150 species on the Durham Heritage Coast in 2014. Our dives continue to show the amazing recovery that is taking place since the dumping of colliery spoil at sea ended some 20 years ago.

Photos from the dives were displayed at the Durham Heritage Coast Partnership Annual Forum. You can see some of these photos <u>here</u>. We are very grateful to the Durham Heritage Coast Partnership for the funding to continue these surveys.

Hornwrack-covered reef on the Durham Heritage Coast

Northumberland

Coquet to St Mary's rMCZ

We carried out dives at nine sites within the Coquet to St Mary's recommended Marine Conservation Zone. Two days of diving were subsidised by the North Sea Wildlife Trusts. The sites surveyed were all in the southern half of the rMCZ between Newbiggin-by-the-Sea and Seaton Sluice, ranging from shallow kelp habitats to deeper reefs and wrecks dominated by faunal turf.

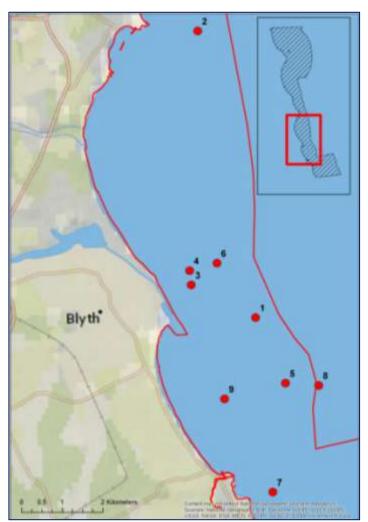

Reef covered in dead men's fingers near Blyth in the Coquet to St Mary's rMCZ

We recorded over 130 species during our dives in the Coquet to St Mary's rMCZ in 2014. We welcome the news that this site has been included in the consultation for designation under Tranche 2 of the MCZ process.

Lemon sole on a reef in the rMCZ

The nine sites in the Coquet to St Mary's rMCZ surveyed by Seasearch North East in 2014

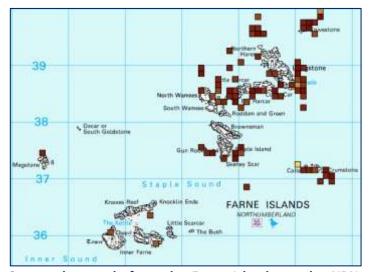

Necklace shell on a reef in the rMCZ

For more information please see our <u>2012 report</u> and <u>2014 update</u> on survey dives in the Coquet to St Mary's Island rMCZ.

Farne Islands

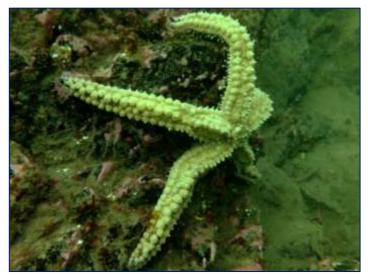

Divers often ask whether it is worth sending in Seasearch forms from the Farne Islands as they are so well recorded.

It is true that we have a lot of Seasearch data for the Farne Islands as shown on the map below, while much of the rest of the north east coast remains unexplored. However, even at these well-dived sites we occasionally find new or unusual things!

Seasearch records from the Farne Islands on the NBN Gateway

Laura Clifton and Claire Brown found an enormous starfish during a club trip to the Farne Islands in May. This turned out to be the first record of the spiny starfish *Marthasterias glacialis* for the Farne Islands, a species which is more commonly recorded on the south and west coasts of the UK.

Spiny starfish at North Harcar by Laura Clifton and Claire Brown

Another visiting diver, Gary Hughes, recorded the beautiful purple sunstar, *Solaster endeca* during a trip to the Farne Islands in July. There are a handful of previous records of this species at the Farne Islands, but most date from the 1980s so recent records are very welcome.

Purple sunstar at Knivestone by Gary Hughes

In November, Gary Gubby spotted this dragonet perfectly camouflaged against the gravel seabed. Closer inspection of his photos showed that it was not the common dragonet *Callionymus lyra*, but the less frequently recorded reticulated dragonet *Callionymus reticulatus*.

Reticulated dragonet at Northern Hares by Gary Gubby

All these interesting records from the Farne Islands were made on independent/club dives rather than on organised Seasearch dives. It is very easy for individuals and clubs to carry out their own Seasearch dives at the Farne Islands.

The following dive operators accept bookings from individuals and small groups, offer tank hire, air fills and some offer accommodation.

Please contact them if you would like to dive the Farnes, and don't forget to send us your records!

Berwickshire Coast

In an attempt to fill the gap in Seasearch data between the Farnes and St Abbs, we planned a day's diving near Berwick with Marine Quest.

We had two fantastic dives on the north Northumberland coast. The first site was close to Marshall Meadows Bay where we carried out Seasearch dives in 2013. We found some new and interesting species on this year's dive, including the crevice sea cucumber *Pawsonia saxicola*, which previously had only one east coast record (from 1987) on the NBN Gateway, and to our surprise another *Marthasterias glacialis* spiny starfish!

Pawsonia saxicola near Marshall Meadows Bay by Chris Newton

The second site was a well-known angling mark, Spittal Hearst, a pinnacle with its peak at 17m depth. The site was very rich in fish life, including cuckoo wrasse, ling, goldsinny, saithe, pollock and ballan wrasse which were not used to seeing divers and were therefore very curious (or territorial)!

Inquisitive goldsinny at Spittal Hearst

Kelp park at 17m depth at Spittal Hearst

On the way back we took advantage of the excellent conditions to have a third dive at Burnmouth Caves, a site which can only be explored on the calmest days. Some divers entered the caves, while others were so captivated by the abundant life on the wall outside that they didn't even get around to the caves!

Goniodoris castanea nudibranchs mating at Burnmouth Caves, with a flatworm top left

2014 courses

We ran an Observer course for 14 participants in February at Yorkshire Wildlife Trust's Living Seas Centre, an excellent venue on the beautiful coastline of Flamborough Head. Our second Observer course, held in March at The Diving Centre in Boldon proved even more popular, attracting 22 participants.

In June we held a Surveyor course at Marine Quest in Eyemouth for 8 participants. Unfortunately the Surveyor training dive in Eyemouth was cancelled due to bad weather, but I'm pleased to say that in spite of this several participants have already completed all their qualifying dives and the ID test or are very close to doing so.

A big thank you to Charlotte Bolton and Chris Wood for travelling such a long way to run this course...especially as they weren't even rewarded with a dive!

Dates for your 2015 Diary

Observer course: 15th March North Shields

Observer course: 13th June Flamborough Farne Island dives: 19th April, 16th May

Hawthorn Hive: 23rd May NT

Thornwick Bay shore dive: 14th June

Berwick and Eyemouth dive weekend: 4th-5th July

Durham Heritage Coast dives: 18th July and 29th August

Coquet to St Mary's rMCZ dives: 9th August, 6th September

Boggle Hole shore dive: 15th August **NT**Souter and the Lees: 30thAugust **NT**

Coquet to St Mary's rMCZ: 6th September

Dives marked **NT** are part of the National Trust's programme of <u>coastal bioblitzes</u> to celebrate the 50th anniversary of Enterprise Neptune.

Lumpsucker guarding eggs at Runswick Bay rMCZ

Any dive can be a Seasearch dive!

While it is good to get Seasearch data from our organised dives, it is especially useful to have records from independent and club dives. This extends our coverage significantly.

If you dive or snorkel anywhere on the Yorkshire or North East coast, please consider filling in a Seasearch form.

We particularly need records from Yorkshire. The following clubs organise regular dives on the Yorkshire coast and welcome new diving members. Why not drop them a line, join their dives and help us fill the gaps on the Yorkshire coast!

Cleveland Divers

Cleveland Divers are based in Saltburn-by-the-Sea, and do shore and wreck dives off Redcar which is about 10 minutes away. Their club RIB can take six divers, and two club members also have their own RIBs so when sea conditions are good they try to take out more than one boat. There are six active Seasearchers the club, one of whom has already progressed to Surveyor level, and they are a very friendly group with great enthusiasm for local sites and wildlife. They can be contacted via the club's Facebook page The Diving Club-Cleveland or via the BSAC website (branch number 0978).

South Bay Scuba

Based in Scarborough, South Bay Scuba is a very friendly and active club with a compressor, a hard boat and two RIBS. They dive on reefs and wrecks anywhere between Whitby and Bridlington, although the beautiful wildliferich reefs near Scarborough are a favourite with the Seasearchers in the club! They have their own compressor, hard boat and two RIBS in Scarborough harbour, so are able to organise dives whenever the weather and viz are good. Diving membership is £25 (plus BSAC subs if not already a member of BSAC). For further information visit www.southbayscuba.co.uk or contact Anne Morrison on morrisonanne45@gmail.com
